

Choose from 6 preconfigured light patterns
or create your own light pattern!

Create Helicopter Landing Zones ■ ■ ■ ■ ■ IR

Twister-Lights® is an unique, rechargeable safety light beacon for police, fire departments, emergency services and helicopter companies. Made out of strong industrial plastics, Twister-Lights® are designed to mark areas fast and safely. It is the ideal product for creating road markers with traffic or fire accidents and for creating helicopter landing zones. Twister-Lights® has no buttons. Just take the Twister-Lights® from the charger, turn it upside-down and it turns on.

To create a temporary LZ, just take four Twister-Lights® from their unique charging sticks and place them on the ground, marking the four corners of the LZ. Twenty bright LED's rotate with a 30 degrees angle, ensuring maximum visibility for approaching pilots and ensuring the pilot is not blinded by the bright LEDs when hovering above the LZ for touch down. If regulations require specific light patterns and/or colors we can program and extend your Twister-Lights® with any light pattern.

Twister-Lights® can be transported either mounted in a car using the metal protection unit or with the industrial lightweight travel case with built-in charging unit.

Benefits

- Industrial plastics with life time warranty on cover.
- 6 Light pre-configured light effects.
- Order your own light effect.
- Unique charging system.
- Fast deployment; no buttons or switches.
- Lifecycle 6-8 years.
